FOREWORD

The Missouri Division of Alcohol and Drug Abuse is pleased to present this ninth edition of the *Status Report on Missouri's Alcohol and Drug Abuse Problems*.

This report uses state and national surveys to compare alcohol, tobacco, and other drug use in Missouri with national prevalence rates. It highlights some of the consequences of substance abuse as reported by various public entities. Trend data and charts illustrate the changes in the magnitude of substance abuse problems over a period of several years.

The Division of Alcohol and Drug Abuse contracts with substance abuse treatment programs to provide publicly supported services, and this report summarizes the characteristics of the clients receiving those services. Additional information regarding the Division's treatment and prevention services is available from the Division's regional offices located in Kansas City, St. Louis, Springfield, Columbia, Rolla, and Poplar Bluff. The addresses and phone numbers of these offices are listed on the map in the appendix of this publication. The eighth and ninth editions of the Status Report are accessible on the web through the Division's homepage at:

<http://www.modmh.state.mo.us/ada/index.html>

Inquiries and comments pertaining to this publication should be directed to the Division's Research and Statistics unit.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael Couty", is positioned above the printed name.

Michael Couty

MC/hd

ACKNOWLEDGMENTS

The Missouri Division of Alcohol and Drug Abuse would like to recognize individuals from other agencies who contributed current data for this Ninth Edition. The Division is grateful for the special programming these administrators and analysts developed to extract the data needed to meet the report's criteria.

INTRODUCTION

The *Status Report on Missouri's Alcohol and Drug Abuse Problems* is issued annually by the Missouri Department of Mental Health, Division of Alcohol and Drug Abuse. The primary purposes of this report are 1) to provide policy makers, planners, service providers, and researchers with a broad set of quantifiable measures and indicators of substance use, abuse, and addiction in Missouri, and 2) to provide comprehensive data describing the clients receiving services in treatment programs funded by the Missouri Division of Alcohol and Drug Abuse.

Criteria for identifying substance dependence and abuse are specified in the *Diagnostic and Statistical Manual of Mental Disorders, 4th Edition*. According to a recent national study, an estimated 7.3 percent of the U.S. population age 12 and older was dependent on or abused alcohol or illicit drugs in 2001 [65]; see "References" in the appendix. The study also found that 7.3 percent of the population age 18 and older had serious mental illness, and one-fifth of the mentally ill had a co-occurring substance abuse problem. Missouri's most recent needs assessment study estimated that 378,000 Missouri adults age 18 and older need alcohol or drug abuse treatment and 114,000 adolescents 12-17 years of age need intervention or treatment [47, 48]. Among the adults needing substance abuse treatment, approximately two-thirds described their own mental health as good, while one-third described it as fair or poor.

Substance abuse is treatable, yet private treatment is prohibitively expensive for the disproportionate number of people needing treatment who have low incomes and lack insurance coverage. In 1999, clients in 64 percent of substance abuse treatment admissions nationwide had no health insurance coverage for treatment. Medicaid provided coverage for an additional 14 percent. Only 22 percent of clients had private insurance or other forms of payment [62]. For those unable to afford services, publicly funded programs are necessary. The Missouri Division of Alcohol and Drug Abuse administers state and federal funding to provide the majority of publicly supported substance abuse treatment services in Missouri. A national treatment program survey conducted annually consistently indicates that these Division-funded programs provide services to approximately three-fourths of all Missouri residents who receive treatment [64, 69]. Therefore, of the 492,000 Missouri residents (378,000 adults and 114,000 adolescents) estimated to need treatment services in the Missouri prevalence study, a projected 369,000 are expected to require public support. In fiscal year 2002, the Division of Alcohol and Drug Abuse was able to provide treatment and clinical intervention services to 51,273—only about one-seventh of the estimated number who need publicly-supported services [25]. Based on a study by the Substance Abuse and Mental Health Services Administration, in a recent year in Missouri the treatment gap—the number of persons needing but not receiving treatment for illicit drug use—was estimated to be over 67,000 [63]. The study did not estimate the state's treatment gap for alcohol abuse and dependency services.

According to recent studies, the societal costs of substance abuse in the United States were \$184.6 billion for alcohol abuse in 1998 [57], \$160.7 billion for drug abuse in 2000 [71], and \$157 billion for cigarette smoking in 1999 [54]. These nationwide costs total \$502.3 billion per year, and Missouri's share of this burden is estimated to be \$10 billion. On a per capita basis, substance abuse has an annual cost of almost \$1,800 per Missouri resident, including more than \$1,200 per resident for alcohol and drug abuse. These costs include loss of productivity due to

substance abuse related illnesses and deaths, motor vehicle crashes, fire destruction, crime, fetal alcohol syndrome, acquired immune deficiency syndrome (AIDS), and the treatment and support of people with substance abuse problems.

Treatment for substance abuse has a good success rate and is cost effective. Missouri recently completed a follow-up study of clients receiving treatment in programs funded by the Division of Alcohol and Drug Abuse [46]. The study identified several positive treatment outcomes. Two-thirds of the clients were not using alcohol or drugs six months after entering treatment, and three-fourths of those not using at six months were also not using one year after entering treatment. Overall, about one-half of the clients in the study were abstinent at both the 6-month and 12-month follow-ups. Clients showed improvement in the areas of employment, physical and mental health, family and social relations, and legal status. The number of clients with illegal income diminished, and average monthly income more than doubled. Studies from other states and from corporations with employee assistance programs have documented substantial cost savings and other benefits from substance abuse treatment [61]. The California Treatment Assessment study conducted follow-up on about 3,000 clients [59]. The study documented large taxpayer savings due to reductions in crime. Treatment episodes lasted an average of about three months and cost \$1,400, but yielded average savings of about \$10,000 per client. In contrast to the huge annual societal per capita costs of substance abuse cited earlier, the federal Center for Substance Abuse Treatment has estimated that a full continuum of services for addictive disorders could be provided to everyone needing treatment for a per capita expenditure of only \$45 per year [60].

DATA CONTENT AND FORMAT

The types of substance abuse measures and indicators presented in this report are commonly used by other federal and state authorities. Some data are direct measurements of substance abuse events such as consumption of alcohol and drugs during pregnancy, impaired driving crashes, and emergency room visits for drug overdoses. Others—such as unemployment, domestic violence, and exposure to certain communicable diseases—have a statistical correlation but are not always related to substance abuse. National and state estimates of alcohol and other drug use prevalence typically are derived from a combination of analyses including household interviews or telephone surveys and a variety of direct and correlate data. Alcohol and other drug abuse have a profound impact on a wide range of quality of life factors such as health, family relations, education, economic prosperity, housing, and legal status. As discussed below, a broad array of data is needed to quantify these impacts.

Health problems associated with substance abuse range from prenatal alcohol and drug exposure—causing newborn addiction or lifelong impairments—to chronic diseases resulting in several of the leading causes of death. Much of the prenatal exposure data is underreported. Alcohol and drug related deaths and hospitalizations are quantified based on the International Classification of Diseases (ICD) coding developed by the World Health Organization. Mortality data began being coded using ICD-10 in 1999, resulting in a change in the complex set of rules for selecting the single underlying cause of death from among several interrelated causes. The reader

is urged to use caution in comparing pre-1999 data on deaths with more recent data. Hospital and emergency department data continue to be based on the ICD-9 codes.

Public safety is compromised through alcohol and drug related traffic crashes, violence and non-traffic injuries resulting from intoxication, the dangerous environments of illicit drug manufacturing and distribution, and crimes committed to purchase addictive drugs. Victims of violence are more likely to be seriously injured if their perpetrators have consumed alcohol and/or other drugs [70]. Traffic crashes are categorized according to whether they resulted in fatalities, injuries, or property damage, and whether there was the presence of any of a set of standard conditions that are known to contribute to their occurrence. Alcohol and drug involvement are two of these quantifiable conditions noted in Missouri traffic crash reports. Beginning in 2001, new federal data submission requirements for the Uniform Crime Report (UCR) program have resulted in large increases in crime reports. Due to these changes, the 2001 data cannot be directly compared to the crime data from earlier years. Drug offenders and persistent DUI/DWI offenders continue to comprise a substantial portion of incarcerations and probation or parole openings.

Substance abuse also contributes to interpersonal conflict, family disintegration, domestic abuse, and emotional suffering. One-half of domestic violence perpetrators are believed to be addicted to alcohol or drugs, and an estimated 80 percent of child abuse cases involve parental substance abuse [60]. The inclusion of a variety of juvenile court referral data in this report underscores the strong connection between familial substance abuse and other family dysfunctions. Perhaps most striking is the number of children removed from their homes because of alcohol or drug abuse by their parents or caregivers.

Substance abuse is over-represented among people with low educational achievement, unemployment, and poverty. Public school dropout rates, unemployment rates and vocational rehabilitation admissions for alcohol and drug disabilities are productivity indices included in this report.

New federal and state laws and enforcement regulations have been enacted during the past several years to restrict youth access to tobacco. A separate section summarizes the current status of tobacco regulation, merchant education, and youth tobacco use in Missouri.

To illustrate trends, U.S. prevalence tables and Missouri data tables and charts include counts or rates from the most current year available and several past years. Indicator and treatment data are provided for each of the five Division of Alcohol and Drug Abuse administrative regions and 20 Service Areas. An illustration of these regions and service areas is included in the Appendix of this report. The data in these tables is provided for the most current year available and the two preceding years. Due to reconfigurations of Service Areas 8 and 12 on July 1, 2002 involving Morgan and Pettis counties, data for these Service Areas for prior years has been adjusted. Data is provided in the same format for Missouri's 115 counties, arranged according to Federal Information Processing Standards (FIPS) county code. Each data element reflects 12 months of activity and reflects a calendar year unless specified as "FY" for state fiscal year (July 1 - June 30) or "FFY" for federal fiscal year (October 1 - September 30).

HIGHLIGHTS

Department of Mental Health Strategic Plan

- The Division of Alcohol and Drug Abuse continues to implement strategies to accomplish the substance abuse objectives of the Department of Mental Health Strategic Plan developed in 2001. The plan places a high priority on the prevention of substance abuse and other mental health problems. Original objectives for the Division of Alcohol and Drug Abuse are to reduce binge drinking among Missouri college students and delay onset of use of alcohol and other drugs by Missouri youth. A third objective—to increase the number of pregnant women admitted to CSTAR treatment programs—was added in the plan’s first update [22]. Baseline and annual measures for these objectives are documented in the department’s Strategic Plan Information Network.
 - The CORE Institute Survey was administered in 2001 to students at 10 Missouri public universities and colleges. The survey found that 47.6 percent of the students surveyed were binge drinkers, defined as consuming at least five alcoholic drinks on a single drinking occasion at least once during the two weeks preceding the survey. The survey was administered again in 2002 at those same schools and at two additional Missouri universities. The 2002 binge drinking rate was 46.3 percent [74].
 - The Missouri Student Survey was administered in 2000 to Missouri students in grades 6, 8, 10, and 12. According to that survey, the average age of first use of alcohol was 12.8 years of age. The survey was again conducted in 2002, with first use of alcohol occurring at an average age of 12.7 years. In the 2000 survey, the average age of first use of cigarettes was 12.2 years; in the 2002 survey the average age of first cigarette use was 12.1 years. The average age of first marijuana use was 13.6 years in the 2000 survey. In 2002, the average was 13.7 years of age. The small differences in results are statistically insignificant and therefore inconclusive in determining whether changes have begun to occur in the average age of first use of these drugs [45, 49].
 - The Department of Mental Health’s CTRAC system collects information on the pregnancy status of clients entering substance abuse treatment programs. Consistent with federal requirements, the Division admits pregnant women into treatment programs on a priority basis. The unduplicated count of pregnant women admitted in recent years has increased steadily from 176 in fiscal year 1998 to 281 in fiscal year 2002 [24].

New Data on Alcohol and Drug Abuse Released in 2002

- The National Household Survey on Drug Abuse was expanded beginning in 1999 to make it possible to estimate the prevalence of alcohol and drug use in each state. In 2002, additional Missouri estimates were produced using combined data from the 1999 and 2000 surveys [66, 67]. Some of the findings are:
 - **Alcohol:** Among the population ages 12 and older, Missouri’s overall percentage of current drinkers (those consuming alcohol within 30 days prior to the survey) in 2000 was 44.8 percent, compared to 46.6 percent nationally. In this same age group, 20.2 percent of Missouri residents were binge drinkers, consuming at least five drinks on a single drinking occasion at least once in the preceding 30 days. The national rate in 2000 was 20.6

percent. Alcohol use among adolescents 12-17 years of age was 16.1 percent, slightly lower than the national rate of 16.4 percent. Binge drinking was 10.5 percent in Missouri and 10.4 percent in the U.S. for this age group. Alcohol use among the 18-25 age group was higher in Missouri than nationally, with current use running 58.9 percent in Missouri compared to 56.8 percent overall in the U.S. Binge drinking was also more prevalent in Missouri—39.1 percent in Missouri and 37.8 percent nationwide. Missouri's population age 26 and older had lower rates of alcohol use and binge alcohol use than the national averages.

- **Marijuana:** Missouri has a lower prevalence of marijuana use than the national average. Among adolescents and adults 12 years of age and older, 4.3 percent of Missouri residents and 4.8 percent of the U.S. population were current marijuana users. In the adolescent age group of 12-17, current use was 6.6 percent in Missouri and 7.2 percent nationwide. Missouri and the U.S. had identical marijuana use rates of 13.6 percent in the 18-25 age group. Among older adults, 2.5 percent of Missouri residents and 3.0 percent nationally were currently using marijuana when the 1999 and 2000 surveys were conducted.
 - **Tobacco:** Among Missouri adolescents 12-17 years of age, almost one-fifth were current users of cigarettes or another tobacco product in 2000. Cigarette smokers comprised 15.1 percent of this age group in Missouri, compared to 13.4 percent of the 12-17 year olds nationwide. More than one-half of Missouri young adults 18-25 years of age were current tobacco users, and 45.6 percent were smokers. This compares to a nationwide smoking rate of 38.3 percent for the 18-25 age group, with Missouri exceeding the national rate by 7.3 percentage points. Missouri's cigarette smoking rate among adults over age 25 was 28.3 percent, more than four percentage points higher than the national rate.
- Another measurement of tobacco use is derived from the Behavioral Risk Factor Surveillance System [55]. Between 2000 and 2001, Missouri showed some improvement in adult cigarette smoking, with current use dropping from 27.2 percent to 25.9 percent of the population 18 years of age and older. Missouri's adult smoking rate is approximately three percentage points greater than the median rate of 22.8 percent among all states. In 2000, Missouri was ranked third highest in smoking rates. However, Missouri's prevalence decreased in 2001 while rates in some other states increased. As a result, Missouri currently ranks ninth in adult smoking with rates lower than Kentucky, Oklahoma, West Virginia, Ohio, Indiana, Nevada, Alaska, and South Carolina. Cigarette sales in Missouri declined for the sixth consecutive year [42].
 - Alcohol consumption among the Missouri population age 14 and older increased for the fourth consecutive year, with per capita consumption reaching 2.26 gallons of ethanol (absolute alcohol) in 1999, the year of the most recent estimate. Per capita consumption for the United States for the same age group is 2.21 gallons [56].
 - Domestic violence reports totaled 37,277 in 2001, not including the city of St. Louis. One-fourth of these reports involved a spouse, and one-fifth involved a cohabitating partner or roommate [29].
 - Little change was reported for substance abuse during pregnancy [19].
 - The reported number of mothers of newborns who drank during their pregnancies increased slightly from 548 in 2000 to 553 in 2001, and the rate of reported consumption in-

- creased from 7.20 per 1,000 live births in 2000 to 7.34 in 2001. Maternal alcohol consumption during pregnancy is known to be considerably under-reported.
- The reported number of mothers of newborns who smoked during their pregnancies decreased from 13,955 in 2000 to 13,761 in 2001, but the reported rate remained unchanged at 18.3 percent.
- A lower dropout rate for high school students in grades 9-12 continued a multi-year downward trend that ran throughout the 1990's. The dropout rate decreased from 5.1 percent in 2001 to 3.9 percent in 2002 [9].
 - Reported cases of Hepatitis C continue to increase rapidly in Missouri. Missouri recorded 2,474 cases in 1999; 4,884 cases in 2000; and 8,447 in 2001 [20]. The National Institute on Drug Abuse estimates that 60 percent of Hepatitis C cases result from injection drug use, with many of the exposures originating in earlier years [58].
 - Deaths for medical conditions with an underlying cause of alcohol or drug abuse increased in 2001. Alcohol related deaths increased from 324 to 348 and drug related deaths increased from 332 to 378 [12].
 - Alcohol related traffic crashes decreased slightly, from 8,417 in 2000 to 8,393 in 2001. However, fatal crashes attributed to alcohol intoxication increased from 221 to 241, resulting in 266 deaths [35, 38].
 - Drug related crashes decreased from 785 to 779, and the number of people killed in these crashes dropped from 38 to 17 [36, 39].
 - The Missouri State Highway Patrol implemented the Missouri portion of the Uniform Crime Report (UCR) system in 2001. This system ensures mandatory reporting of certain types of offenses and most types of arrests, resulting in a more comprehensive, unduplicated count of arrests including DUI/DWI, drug manufacturing and distribution, and drug possession. In 2001, reported arrests for driving under the influence of alcohol or drugs totaled 36,129. There were 8,549 arrests for the sale or manufacturing of drugs and 34,274 arrests for possession of illicit drugs [32]. Law enforcement agencies made 2,130 seizures of methamphetamine labs, chemicals, equipment, and dumpsites [33]. Due to the new reporting requirements, the UCR data for 2001 cannot be compared to offense and arrest data for previous years.
 - Prison admissions for drug offenses increased from 4,648 in FY2001 to 5,212 in FY2002. New incarcerations for driving while intoxicated decreased from 1,332 in FY2001 to 1,239 in FY2002 [1]. On the last day of FY2001, Missouri prisons held 5,907 inmates convicted of drug offenses and 1,184 convicted of driving while intoxicated. One year later, on the last day of FY2002, the prisons held 6,415 drug offenders—an increase of 508, and 1,243 DWI offenders—an increase of 59 [3]. Probation and parole openings for drug offenses increased from 9,982 in FY2001 to 10,421 in FY2002. Probation and parole openings for DWI offenses decreased during this period—from 2,602 in FY2001 to 2,490 in FY2002 [2].

DIVISION OF ALCOHOL AND DRUG ABUSE SERVICES

The Division of Alcohol and Drug Abuse supports an array of prevention, intervention, and treatment services. In the state fiscal year 2002 (July 1, 2001 through June 30, 2002), the Division of Alcohol and Drug Abuse contracted with service providers for substance abuse detoxification, residential and outpatient treatment, compulsive gambling counseling, and traffic offender services. Major funding sources for these programs are from federal Substance Abuse Prevention and Treatment block grant funds, federal and state Medicaid payments, Missouri general revenue, Compulsive Gambling funds, and Health Initiative funds.

The Division maintains a comprehensive prevention system based on a risk and protective factor framework. The Division's two strategic goals for prevention are (1) delaying onset of substance use and (2) reducing the incidence and prevalence of binge drinking among college-age youth. The Division's focus for prevention includes implementing an array of evidence-based programs in public schools and communities and building the capacity of coalitions to address local substance use issues. The prevention system includes contracted services for coalition capacity building, community-based alternatives and services for high-risk youth, and school-based prevention and intervention services. In addition, the Division partners with other state agencies to provide a continuum of prevention services throughout the state.

The Division administers treatment services through contracts with a network of specialized substance abuse treatment programs. The services are provided to individuals who abuse or are dependent on alcohol or other drugs and to their family members who are adversely affected. In fiscal year 2002, these programs provided Division-funded treatment and intervention services to 51,273 clients, consisting of general treatment services to 24,294, Comprehensive Substance Treatment and Rehabilitation (CSTAR) services to 15,814, and Substance Abuse Traffic Offender Program (SATOP) clinical intervention services to 11,165 [25]. The CSTAR program provides intensive outpatient treatment and has components tailored for adolescents, women and their children, and the general adult populations. Individuals are referred to SATOP stemming from an arrest for driving under the influence of alcohol or other drugs. SATOP also has assessment and offender education components, resulting in the provision of SATOP services to a total of 27,417 clients—including 25,829 Missouri residents—in fiscal year 2002.

Although the Division provided treatment services for 51,273 in fiscal year 2002, new admissions and readmissions totaled 41,269 and the remaining clients were already in treatment at the beginning of the fiscal year [24]. These fiscal year 2002 admissions included 38,914 for alcohol or other drug abuse or dependency treatment; 2,066 codependency admissions for people adversely affected by a family member's alcohol or drug problem; and 289 whose primary problem was compulsive gambling. The detailed clinical data presented throughout this report summarizes the characteristics of the 38,914 client admissions for substance abuse treatment.

Some clients need access to a stable, drug-free living environment after attaining sobriety. To facilitate their recovery, the Division coordinates 60 self-run, self-supported Oxford Houses. There are 50 houses for men and 10 for women, with a total capacity of 440 residents.

TREATMENT TRENDS

Admissions to Division of Alcohol and Drug Abuse programs for substance abuse and addiction treatment totaled 38,914 in fiscal year 2002. This was a decrease from the record 39,787 substance abuse admissions registered in fiscal year 2001 [24]. The decrease reflects a reduction in the resources required to sustain the fiscal year 2001 plateau, rather than a reduced demand for treatment or narrowing of the treatment gap [63].

Admissions for women totaled 11,925 in fiscal year 2002—higher than in any previous year. Women accounted for 30.6 percent of the treatment admissions, the highest portion recorded since fiscal year 1995. The number of treatment admissions for pregnant women was 357, also higher than in any previous fiscal year. These admissions reflect an unduplicated count of 281 women. A total of 84 healthy babies were born in fiscal year 2002 to women who were active clients in CSTAR programs for Women and Children and Alt-Care programs, compared to 58 healthy births to clients in these programs in fiscal year 2001.

Treatment admissions for Caucasians—27,128—and Asians/Pacific Islanders—69—also reached record highs, while admissions for African Americans—10,939—and Hispanics—252 were down from their fiscal year 2001 peaks. Admissions for Native Americans/Alaskans remained unchanged at 194. For the seventh consecutive year, clients have averaged 33 years of age.

The portion of clients who were employed when entering treatment declined from 33.2 percent in fiscal year 2001 to 31.2 percent in fiscal year 2002. More than two-thirds of the clients were either unemployed or not seeking employment.

Admissions among clients with three or more arrests within the last two years continued to increase, reaching 15,783 admissions in fiscal year 2002—40 percent of all treatment admissions. In fiscal year 2002, 18,807 admissions resulted from criminal justice system referrals.

Admissions for clients who are injection drug users increased from 8.5 percent in fiscal year 2001 to 8.7 percent in fiscal year 2002, but remained lower than the 9.0 percent recorded in fiscal year 1999. Over 38 percent of fiscal year 2002 injection users injected drugs daily, and an additional 16 percent injected drugs from one to six days per week. Injection users who reported less than weekly use continued a multi-year climb, reaching 1,543 admissions in fiscal year 2002.

As in past years, alcohol accounted for the most treatment admissions—16,147—for primary drug of abuse. Marijuana admissions remained second with 9,991 and cocaine was third with 6,541. While treatment admissions for most drugs of abuse decreased in fiscal year 2002, admissions for methamphetamine continued to climb upward. In fiscal year 2002, there were 3,528 admissions for stimulants—virtually all for methamphetamine as the primary drug problem—compared to 3,341 admissions in fiscal year 2001. Heroin remained the fifth most frequently mentioned primary drug of abuse with 1,531. Admissions for narcotics and analgesics other than heroin increased from 376 in fiscal year 2001 to 497 in fiscal year 2002. Phencyclidine (PCP) admissions increased from 187 to 219. Treatment admissions for other illicit drugs, prescription medications, and over-the-counter medications increased from 103 in fiscal year 2001 to 115 in fiscal year 2002.

YOUTH AND TOBACCO IN MISSOURI

Youth Access Laws

- **No tobacco sales to persons under age 18:** Missouri state law prohibits the selling of tobacco products to anyone under the age of 18 years. Merchants are also required to post a state law sign at every tobacco display, including cigarette machines. (*RSMO 407.926-407.927*)
- **State Law Enforcement:** The Department of Public Safety—Division of Liquor Control has the authority to enforce the state's laws related to the control and sale of tobacco. (*RSMO 407.934*)
- **Vending Machines:** As of January 1, 2002, vending machines are required to be equipped with a device that disables them until unlocked by a sales person. Vending machines located in areas where patrons must be over the age of 18 or in places not generally accessible to the general public are exempted from this requirement. (*RSMO 407.931*)
- **Minor possession:** No person under the age of 18 shall purchase, attempt to purchase, or possess tobacco products unless in the course of employment. Persons under the age of 18 will have their tobacco products confiscated. (*RSMO 407.933*)
- **Tobacco Registry:** The Department of Revenue is required to establish and maintain a listing of establishments that sell tobacco products in the state. (*RSMO 407.934*)
- **Federal Regulation:** Federal SYNAR regulation, administered by the US Department of Health and Human Services, requires all states to establish laws that make it unlawful to sell or distribute tobacco products to any individual under the age of 18 years and to enforce such laws in a manner that can reasonably be expected to reduce youth access to tobacco products. It also requires states to annually measure compliance through random, unannounced inspections. All states are expected to achieve a violation rate of no more than 20 percent. (*42 U.S.C. 300x-26 and 45 C.F.R. 96.130*)

Current Status

- **Youth Lifetime Use:** Over 75 percent of Missouri high school students surveyed reported having tried cigarette smoking [7].
- **Youth Current Use:** In 2001, 35.4 percent of Missouri high school seniors reported current use of cigarettes, up somewhat from 33.5 percent in 1999 but down from a high of 48.2 percent in 1997. For most of the 1990's, the rate of current cigarette use among Missouri high school seniors had been considerably higher than the corresponding rate for the nation as a whole [7, 72]. The next Missouri senior survey is scheduled for 2003.

- **Merchant Compliance:** In 2002, an estimated 11.00 percent of Missouri merchants unlawfully sold cigarettes and smokeless tobacco to individuals under the age of 18 years—down from the previous year's rate of 16.71 percent. For the past three years, the State has had a non-compliance rate below the long-term Synar target rate of 20%. The State has used a combination of law enforcement and merchant education activities in order to bring down the non-compliance rate from a high of 40 percent (baseline year) to a rate less than the 20 percent target rate, as illustrated on the next page [23].

State Initiatives aimed at Youth Tobacco Access

- Law Enforcement Surveillance:** The Division of Liquor Control has fifty field agents to enforce both alcohol and tobacco laws. Citizen or local law enforcement complaints initiate surveillance investigations. During FY2002, 17 arrests and one guilty disposition were made for violations of Sale of Tobacco to Minors (407.931.3), 196 arrests and 14 guilty dispositions were made for violations of Possession or Attempt to Purchase Tobacco by Minors (407.933.1), and two arrests but no guilty dispositions were made for violations of Misrepresentation of Age to Purchase Tobacco by Minors (407.933.2). The Division of Liquor Control also provides server training covering alcohol and tobacco laws to all interested retailers.
- Merchant Education Program:** During 2002, the Department of Mental Health—Division of Alcohol and Drug Abuse conducted a comprehensive merchant education program that included outlet educational visits, compliance checks, and feedback to clerks and owners/managers [23].

Educational Visits: Visits to tobacco outlets were made to provide merchants with information regarding the state's laws on youth access to tobacco products. From April through July 2002, the prevention teams conducted walk-in visits to the previously identified tobacco retailers in the state. In addition, new businesses that sell tobacco products were identified and visited. Tobacco retailers received up to four visits during this time period. During these visits, informational brochures, tobacco signs, and calendars were given to store employees. In total, 23,505 walk-in visits were conducted in which contact was made with the storeowner, manager, and/or other employees. Owner contacts numbered 4,579. Manager contacts numbered 2,169. Over 6,450 outlets received at least one visit.

Compliance Checks (includes Synar checks): Since April 2001, compliance checks are being conducted in which a youth age 16 or 17 attempts to purchase a tobacco product. If the mode of purchase is over-the-counter, the event is considered a successful unconsummated buy if the retail clerk fails to request ID or the age of the youth prior to requesting payment for the tobacco product and fails to refuse the sale. If the mode of purchase is vending machine, the event is considered a successful unconsummated buy if the youth is able to insert a quarter into the vending machine and leave the premises without intervention by store employees whereby they request ID or the age of the youth. During these checks, the youth inspectors purchase no tobacco products. If the check results in a successful (unconsummated) buy, the clerk receives a caution card. The check is followed-up by a caution letter to the owner/manager generally within two weeks of the check. If the store employee refuses the sale, then the store employee is given a congratulatory card. These checks are followed up with a congratulatory letter to the owner/manager of the retail establishment. From August 1, 2001 through July 22, 2002, there were 3,064 checks (including Synar checks), of which 335 (10.93%) resulted in the issuance of caution cards.

=> Beginning in 1999, data are not directly comparable to earlier years due to use of a computer-assisted instrument that replaced the paper-and-pencil surveys.

* "Binge" alcohol use in the National Household Survey is defined as consuming 5 or more drinks on the same occasion on at least one day in the past 30 days.

** "Heavy" alcohol use is defined as consuming 5 or more drinks on the same occasion on each of 5 or more days in the past 30 days.

* Due to implementation of federal Uniform Crime Reporting in 2001, data totals in these categories are not comparable with pre-2001 totals

** Prior to calendar year 2001, some lab seizure counts were duplicated due to participation and reporting by multiple law enforcement agencies, including the Department of Public Safety's Drug Task Forces, Missouri State Highway Patrol, and the federal Drug Enforcement Administration. Beginning in 2001 with Uniform Crime Reporting, each lab seizure, chemical or equipment seizure, and dumpsite clean-up are counted once
